Subject: RE: NM0028355, U.S. Department of Energy and Los Alamos National Security, LLC, LANL CWA Section 401, Conditional Certification
Importance: High

Isaac and Brent,

This e-mail is being sent to clarify an error in explanations of the above-referenced certification. On Page 8 of 20, the last sentence in the following paragraph should not be included in the quotation:

State WQMP states "If no TMDL has been established, the permitting authority reviews effluent discharge data to ensure that NPDES permits are protective of water quality standards. For all pollutants that have a reasonable potential to cause or contribute to a violation of a water quality standard, the permitting authority performs calculations or modeling to determine effluent limitations. This review is done in accordance with applicable federal regulations and guidance. Pollutant concentrations above the Minimum Quantification Level (MQL) would be considered to contribute to the impairment."

Instead, the paragraph should read:

State WQMP states "If no TMDL has been established, the permitting authority reviews effluent discharge data to ensure that NPDES permits are protective of water quality standards. For all pollutants that have a reasonable potential to cause or contribute to a violation of a water quality standard, the permitting authority performs calculations or modeling to determine effluent limitations. This review is done in accordance with applicable federal regulations and guidance." Pollutant concentrations above the Minimum Quantification Level (MQL) would be considered to contribute to the impairment.

This error does not change the Conditions of Certification. Please let us know if this e-mail is sufficient for your records or if you feel that additional documentation is required. Give me a call if you want to discuss. Erin
